You

Which order priorities generate the most revenue?

BI Assistant

Across the full order history, revenue is distributed very evenly across the five order priorities ? each generates roughly \$45 billion on ~300,000 orders, so no single priority dominates.

****5-LOW**** ranks highest at \$45.50B (300,589 orders), narrowly ahead of ****2-HIGH**** (\$45.48B) and ****1-URGENT**** (\$45.42B). ****3-MEDIUM**** trails at \$45.15B. The gap between the top and bottom priority is only about \$348M ? under 1% ? indicating revenue is essentially uniform across priorities.

You

How does revenue by priority break down across regions or market segments?

BI Assistant

I'll analyze revenue breakdown by order priority across regions and market segments.

I'll query revenue by priority broken down by both region and market segment.

Both breakdowns are ready. Let me visualize them.

I'll create grouped bar charts for both breakdowns.

Here's how revenue breaks down by order priority across both market segments and regions (spanning the full order history in the dataset).

****Key takeaway:**** Revenue is remarkably evenly distributed across all five order priorities within every segment and region. No priority dominates ? each captures roughly 19?21% of its group's revenue, indicating orders are placed across priority levels fairly uniformly rather than concentrated in urgent or low-priority tiers.

****By Market Segment****

BUILDING is the top-earning segment (~\$45.9B total), followed closely by FURNITURE, HOUSEHOLD, MACHINERY, and AUTOMOBILE. Within each segment the leading priority varies slightly (e.g., BUILDING peaks on "2-HIGH", AUTOMOBILE on "5-LOW"), but the spread is narrow.

****By Region****

EUROPE and ASIA lead regionally (~\$45.8B and ~\$45.6B), with AMERICA, AFRICA, and MIDDLE EAST trailing modestly. The MIDDLE EAST shows the widest internal gap ? "1-URGENT" leads while "4-NOT SPECIFIED" lags by ~\$190M.

****Follow-up questions you might find insightful:****

- How does average order value differ by priority within each segment or region?
- Do higher-priority orders actually ship faster (delivery time by priority)?
- Which nations within the top regions (Europe/Asia) drive the most revenue?
